At the beginning of this course, we said that this course would enable you to:

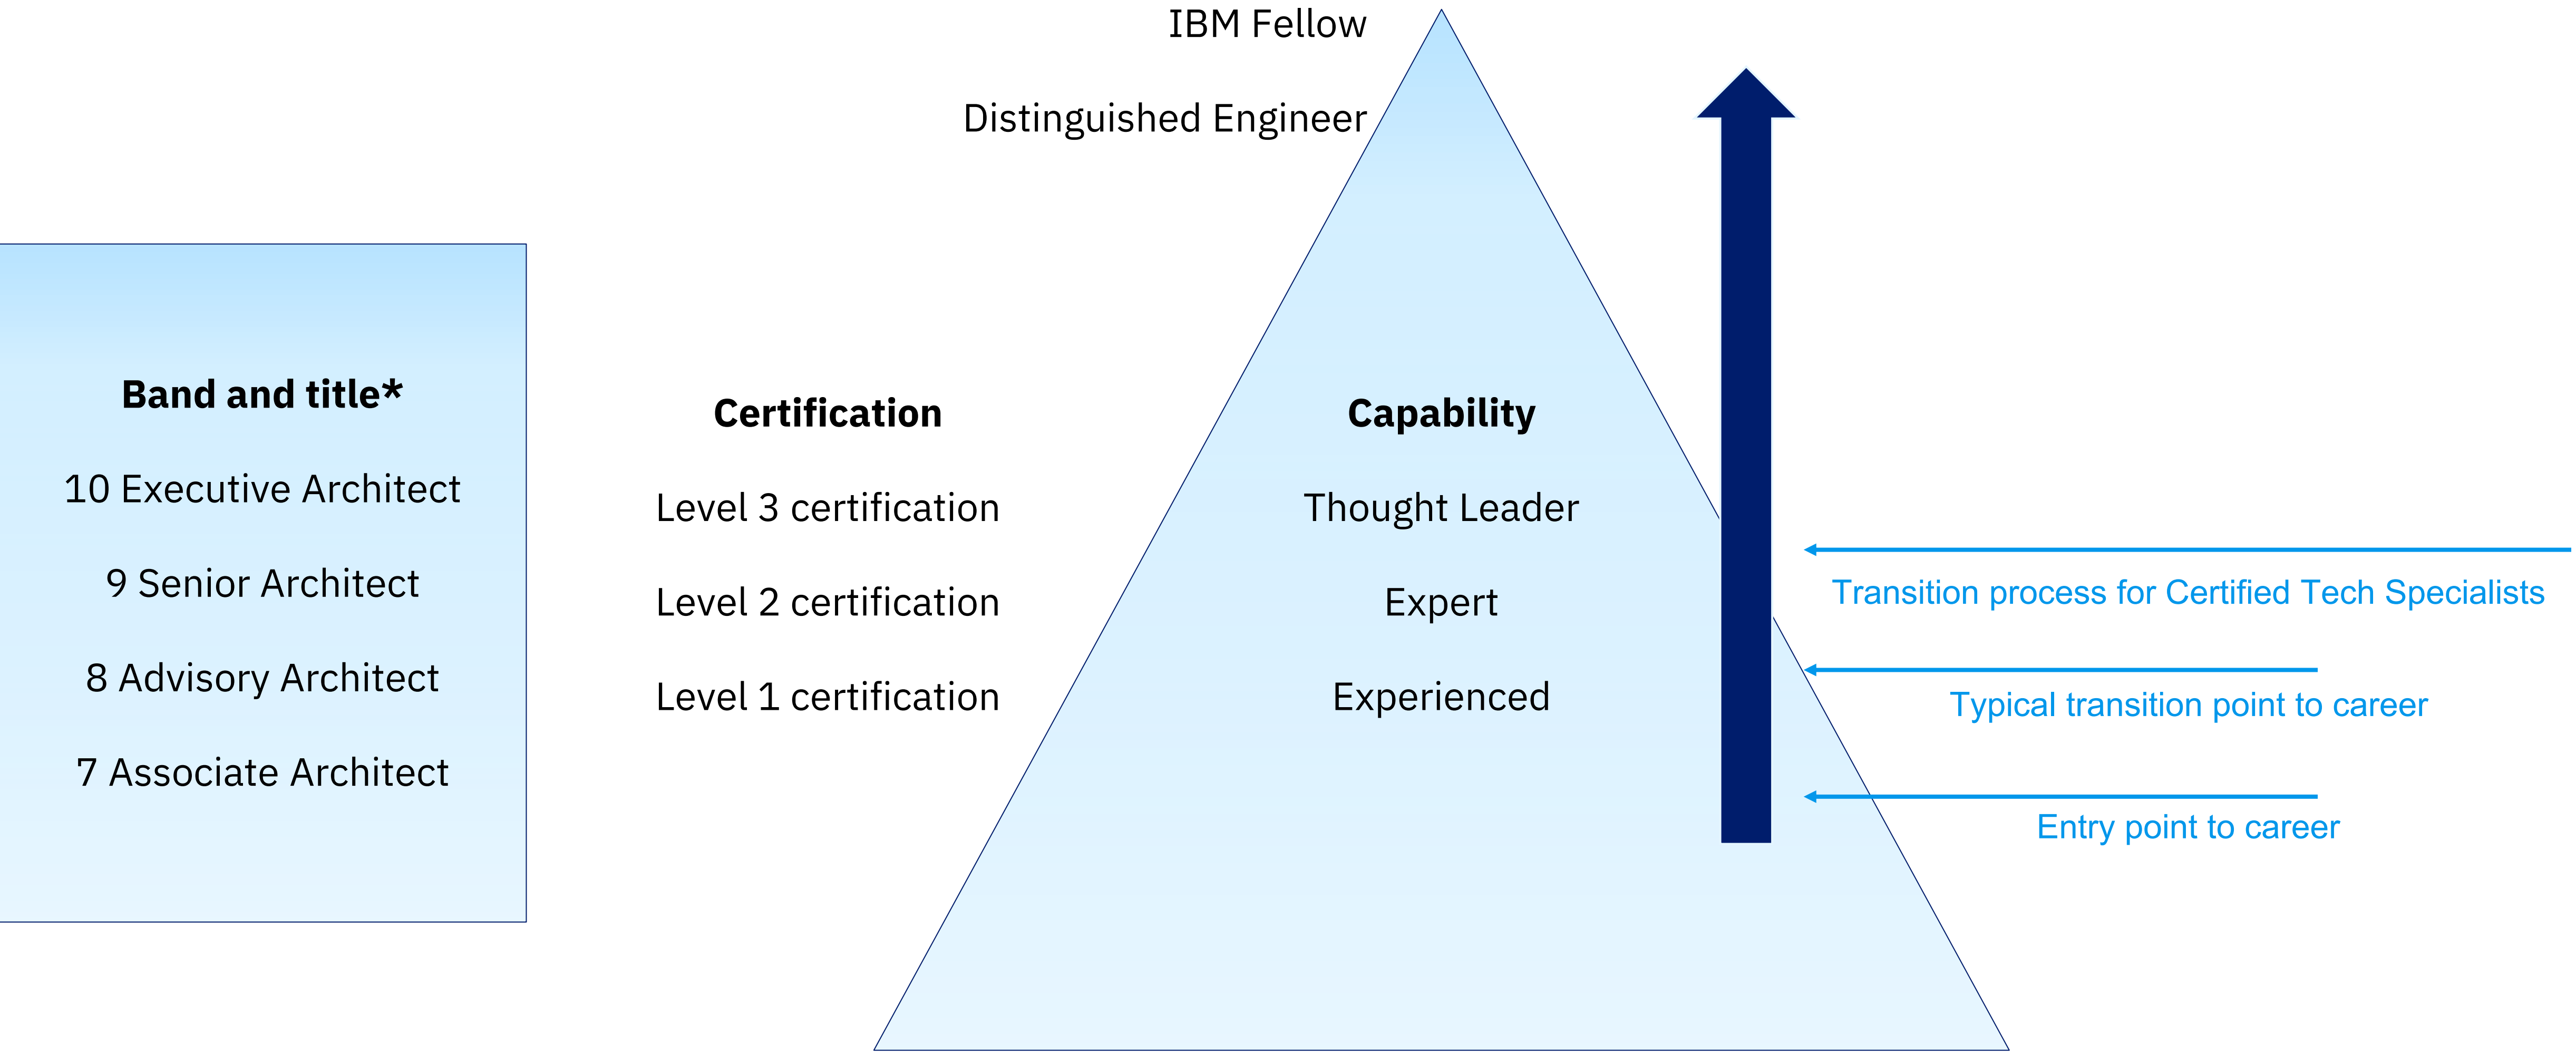

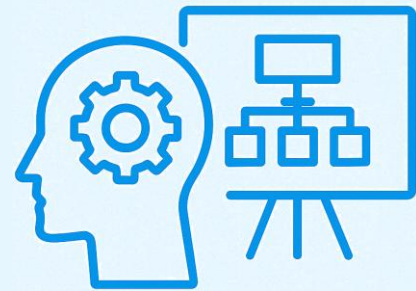

- Describe architecture.
- Understand how to elicit and analyze requirements.
- Define and classify nonfunctional requirements.
- Explain an Architecture Overview and how it fits with the Component and Operational Models.
- Define architectural decisions.
- Understand and apply architectural principles, such as loose coupling and strong cohesion.
- Identify the functional aspects of an IT architecture.
- Explain the approach, steps and artifacts used to define an Operational Model.
- Describe technical reviews and how to incorporate full life cycle validation and verification into architectural thinking.
- Understand how architects operate within agile teams and how agile frameworks and approaches affect architectural styles.

The architectural thinking process

* Promotion guidelines determined by BU and GEO; one can continue to grow in certifications not withstanding band level.

IBM Architect model Certification roadmap

Level 1	Level 2	Level 3	
Experienced The IBM Experienced Certified Architect works independently to apply their skills and competencies to provide value to clients.	Expert The IBM Expert Certified Architect is a lead architect, recognized as an SME, and teaches others in their work.	Thought Leader The IBM Thought Leader Certified Architect provides innovative ideas and strategic direction, working across multiple business units and geographies.	Visit the Certification roadmap in the Architect profession site for the most up to date version of the roadmap.

All senior roles involve a critical nontechnical skill: Leadership

Architects are important leaders on any project.

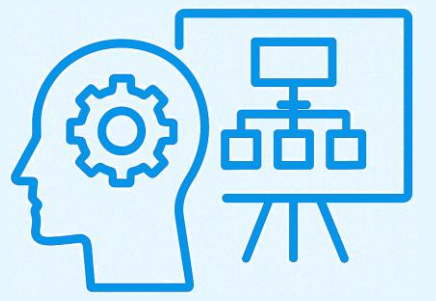

Study topics in leadership:

- Books on leadership can usually be found in the business section of your local bookstores.
- Read autobiographies of leaders to learn their leadership techniques.
- Courses in leadership are available (in Your Learning and external learning platforms).
- Use IBM Leadership Academy materials

Becoming an effective leader requires a commitment to lifelong learning.

To be a leader is to be a teacher.

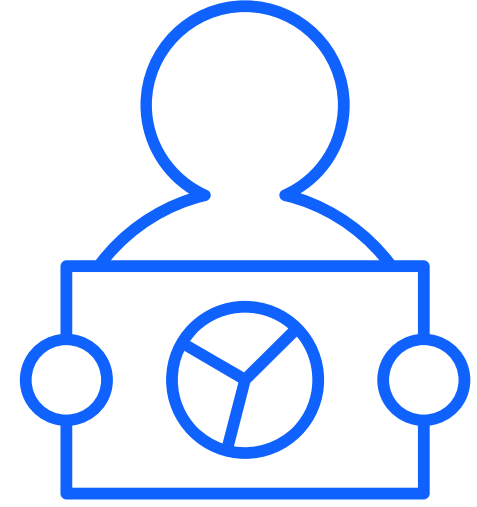

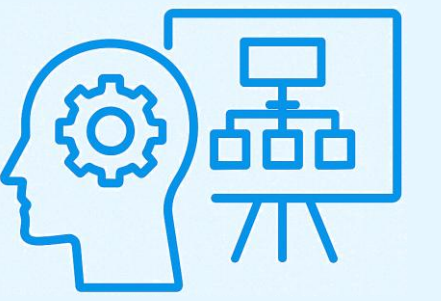

Here are some other educational opportunities

Here are just a few suggestions to start with:

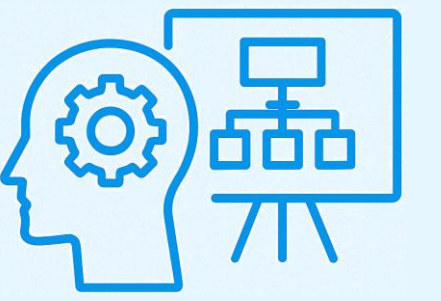

- Design Thinking
- Team Solution Design (or TeamSD - a pre-sales version of the Architecture Method)
- Operational Modeling
- Component Modeling
- Use Case Modeling
- Performance Engineering
- Solution Optimization (SOP) Techniques
- Business Architecture Fundamentals
- Enterprise Architecture

Review the [IBM Architectures website](#) and consult [IBM YourLearning](#) to search for learning activities.

What are the key information sources?

Intellectual capital within IBM.

- The [IBM Architectures website](#)
- The [Method Workspace](#) (including UMF, TeamSD and more).
- [IBM Lighthouse](#)
- [Github @ IBM](#)

And many more!

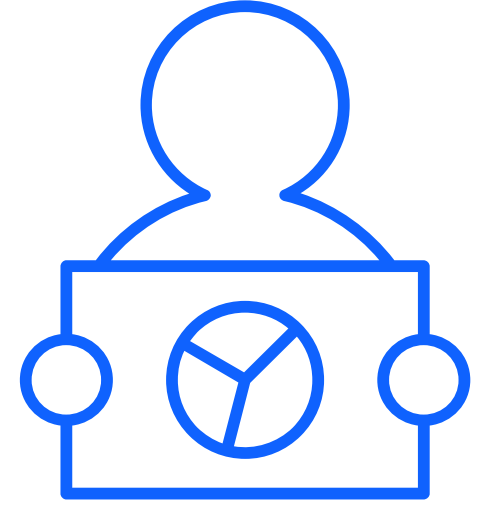

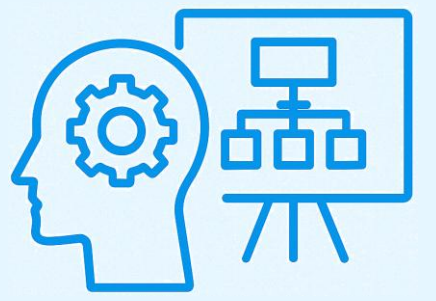

Books:

- N.Rozanski, E.Woods., Software Systems Architecture: Working With Stakeholders Using Viewpoints and Perspectives (2nd Edition), ISBN-13: 978-0321718334
- Bass et al, Software Architecture in Practice, ISBN 0-201-19930-0
- Brown et al, Anti-Patterns, ISBN 0-471-19713-0
- Hohmann, Journey of the Software Professional, ISBN 0-132-36613-4
- Module references included in course materials

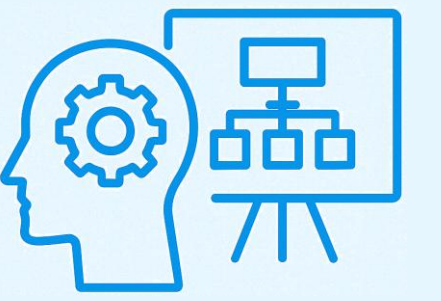

People:

- Find a mentor (either using [Your Guides at IBM](#) or the slack channel #ibm-architect)
- Technical Leadership Exchange

Some final thoughts

We do not expect you to be a “master IT Solution Architect” after attending this course.

You need to put into practice what you have learned here and continue to “**think** like an Architect.”

Follow up on the references you have been given.

Find a mentor to help you.

Start your journey towards Certification.

Thank you
