

Use case -2 for February Month
Agentic AI Driven Onboarding & Offboarding
Intelligent & Autonomous System

Use case -2 Agentic AI Driven Onboarding & Offboarding

CIC FS- 300.ai Club (AI Skills Initiative)

This use case aims to build an **Agentic AI–driven intelligent onboarding and offboarding System** that helps team members quickly onboard on the department or project with context, architecture, responsibilities, and operational processes while automating knowledge transfer, access readiness, and lifecycle management.

On the similar lines , There is a need of offboard from the organization, project and department by revoking their access intelligently and autonomously

Objective

- Accelerate onboarding/offboarding process while reducing the time
- Automate role-based access control , learning and system orientation
- Provide contextual understanding of the project
- Reduce dependency on human-driven KT
- Preserve institutional knowledge during offboarding
- Enable conversational & intelligent assistance
- Improve governance, compliance, and continuity
- Integrate with one of system (IAM , JIRA , Github , Confluence etc) and RAG

Core Capabilities

- Intelligent Onboarding
- Intelligent Offboarding
- Conversational AI Assistant
- Autonomous Monitoring
- Integration with one of system and RAG
